

ASHISH RAJPUROHIT

QA Engineer

I have hands-on experience in website and mobile application testing, including admin panel and ERP system testing. I have contributed to on-demand marketplace and service-based projects, performing both functional and non-functional testing. My responsibilities have included regression, smoke, sanity, and API testing, as well as test case design and defect reporting. I am proficient in tools like Jira and Trello. Additionally, I have completed internships in both frontend and backend development, giving me a well-rounded understanding of the software development lifecycle.

WORK EXPERIENCE

QA Engineer

Technource Pvt. Ltd

01/2024 - Present

About The Company : Technource Pvt Ltd is Custom Software Development Company specialise in a diverse range of services, including AI, Blockchain, IoT, DevOps, Custom Software Development, and Web & Mobile App Development.

My Role & Responsibility

- Collaborate closely with the Project Manager, Coordinator, and Senior Developer to understand requirements and ensure clarity before initiating QA tasks.
- Independently identify and create test cases, followed by collaborative validation with seniors to ensure test coverage and correctness.
- Perform thorough manual testing, take feedback from senior team members, and iteratively improve test accuracy and quality based on suggestions.
- Occasionally handle client-side task updates by updating Trello statuses with clear comments, helping the client stay informed about bug resolutions and QA progress.
- Currently not involved in direct client communication via chat or call, as it hasn't been part of my assigned responsibilities so far.
